मजबूत कोंक्रीट
अटूट विश्वास!

Water permeability test are crucial in determining the Durability and longevity of concrete structures. When comparing regular concrete and RMX Sudarshan the Test reveal significant differences in their water resistance capabilities.

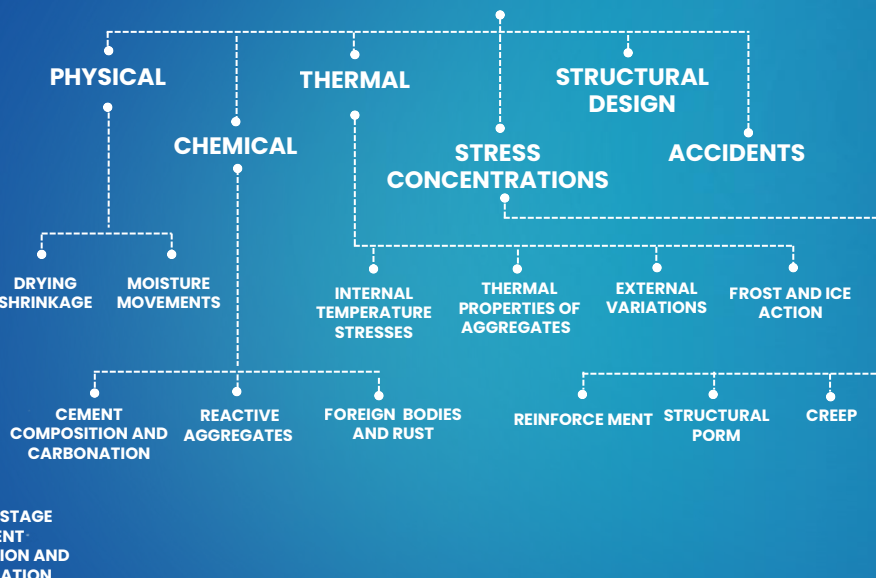

GRADE of Concrete	Water Permeability Test (Depth mm)	
	Regular Concrete	RMIX Sudarshan
M-25	23.5	Below 12.0
M-30	22.3	Below 10.0
M-35	18.9	Below 08.0
M-40	16.8	Below 06.0

TYPES AND CAUSE OF CRACKS IN CONCRETE

RMIX[®]
Sudarshan

- ✓ Reduced Cracking
- ✓ Increased Durability
- ✓ Enhanced Impact Resistance
- ✓ Improved Workability
- ✓ Reduced Maintenance
- ✓ Corrosion Resistance
- ✓ Sustainability
- ✓ Cost-Effectiveness
- ✓ Enhanced Tensile Strength
- ✓ Better Aesthetic

Key Applications

Residential and Commercial Slabs

Driveways, Swimming pool, podium slabs, Terrace slab, sidewalks, patios, garage floors, and shed bases benefit from crack resistance for improved aesthetics and longevity.

Industrial and Infrastructure Projects

Tunnels, bridges, and high-temperature/high-cold areas where temperature changes are significant, such as in seismic retrofitting or mining, are suitable for anti-crack concrete due to its enhanced strength and chemical resistance.

Precast Products

Anti-crack properties are valuable in precast concrete elements for buildings, civil construction, and landscaping, ensuring structural integrity.

Repairs and Maintenance

Crack injection with epoxy or polyurethane is used to stabilize and seal existing cracks, preventing further damage and water infiltration in various concrete structures
